CLEANING and MAINTENANCE

Chalk Boards, White Boards and Pin Boards

(Document Reference CC/CLEAN/BOARDS/01 Rev. 0 March 2010)

(E&OE - Document and content subject to change without prior notice)

We are proud to guarantee our vitreous enamel steel writing surfaces, in respect of normal usage, to perform specifically to the functions for which they were intended and against deterioration or failure of component vitreous enamelled parts for a period of twenty (20) years.

For optimum usage and improved performance, we recommend that chalk board and white board surfaces be cleaned regularly with a damp cloth and a very mild alkaline soap. The cloth should be clean and free of any oily or fatty substances. Please note that at no stage should an ammonia based cleaner (e.g. Handy Andy) be used on white board surfaces as the ammonia leaves a residue which dulls the gloss surface, reducing the performance of the same.

For chalk boards we recommend the use of good quality, dust free chalk, whilst for white boards only the appropriate white board marker pens, with a fibre tip, should be used. Although at no stage should waterproof permanent markers be used, should this occur inadvertently, the ink can be easily removed with a commercially available "Whiteboard Cleaner".

The Flortime Premier surface used on our pin boards is manufactured from polypropylene fibres and is stain resistant, rot resistant and colourfast. In general most stains can be removed by attending to them immediately and by using plain water or a very light detergent solution. When in doubt, use benzene followed by detergent and water.

The Colour Rib carpet material used on our pin boards is also manufactured from polypropylene fibres. In general most stains can be removed by attending to them immediately and by using plain water or a very light detergent solution.
