GENERAL PRODUCT SPECIFICATIONS

Vitraflex “Classic” Modular Changeroom Cubicles (c/w Telescopic Stainless Steel Leg Anchors)

(Document Reference CC/GPS/CUBE/04 Rev. 1 April 2010)

(E&OE - Document and content subject to change without prior notice)

Vitraflex Classic is a versatile and flexible modular system, offering maximum space utilization for an unlimited range of layouts and applications:

- Toilet cubicles.
- Shower cubicles.
- Combination Shower and Changeroom cubicles with benches.
- **Changeroom cubicles with benches** (specifications detailed hereunder).
- Urinal screens.
- Privacy (Modesty) screens.
- Special facilities - nursery schools, disabled toilets, Asian toilets.
- Vanities (Type AF and Type PB2010).
- Bathroom Signage Panels.

Please note that the use of **italics** in the text indicates the need for an appropriate selection to be made by the Specifier:

Vitraflex “Classic” Modular Changeroom Cubicle system consisting of partitions, doors and stiles of waterproof laminated construction with outer skins of vitreous enamel steel sheets bonded to wood particle board, with overall wall thickness not exceeding 20 mm. All partitions to be manufactured in a one-piece construction, no horizontal or vertical joints permitted.

Colour of the vitreous enamel steel to be **[colour name and reference]** selected from the Vitraflex Standard Colour Range.

All units to be neatly framed in a **natural anodised (standard) / powder coated (special)** **[colour name and reference, selected from the Vitrex Powder Coating Colours Schedule]**

(1) aluminium channel beading and to be supplied complete with Vitraflex standard

Member of the Institute

Reg. No. 83/13778/07

ironmongery, comprising of indicator bolts and keeps, coat hooks cum door stops, rubber buffers, top rails and fixing components.

The cubicles are to be set up complete in position, 150 mm above finished floor level, strictly in accordance with the manufacturer's instructions.

All ironmongery is to be secured in position by means of proprietary one-way, anti-theft screws.

All doors to be fitted with *standard aluminium washed butt / rising (door returns to the closed position) / falling (door returns to the open position)* hinges ⁽²⁾.

All stiles and screens to be fitted with Vitraflex telescopic stainless steel leg anchors, in a standard arrangement ⁽³⁾.

Changeroom Cubicles to be fitted with proprietary Vitraflex AF Vitreous Enamelled Steel Bench ⁽⁴⁾, 300 mm deep with integral downstand (Radius = 25 mm, 150 mm high) and secured to brickwork by means of galvanized mild steel support brackets. The joint between the bench and the cubicle components is to be sealed with an appropriate sealant.

The vitreous enamelled steel surface is to be guaranteed to perform specifically to the functions for which it was intended, and to remain functionally unchanged for a period of ten (10) years, under the terms of the general Vitraflex Guarantee."

(A) Specification Notes:

Refer to the numbered references in the specification text.

- (1)** Please refer to the Vitrex Document Ref. CC/PPC/01 "Vitrex Powder Coating Colours for Aluminium Extrusions" for details of the available colours. We would however not recommend the use of powder coated finishes in high traffic areas or in areas which may be prone to vandalism. Please also note that the standard Vitraflex ironmongery components are not available in a powder coated finish.
- (2)** In general, we would not recommend the use of rising or falling hinges to cubicle doors in areas which may be prone to vandalism, as the doors could be lifted out of position and removed.
- (3)** We recommend the use of our standard arrangement for the telescopic leg anchors on all Vitraflex shower and changeroom cubicles, as the Full and End Stiles are supplied with double telescopic leg anchors for added support.
- (4)** We can also provide the more conventional type bench, consisting of timber (Meranti) slats with a protective coating (varnish).

(B) Technical Notes:

- a. Please note that the original “F” and “C” type brackets shown on our old Vitraflex brochure have been discontinued and have been replaced by a continuous u-channel.
- b. The maximum single piece construction width for partitions is 1600 mm and for special wall stiles is 1200 mm. Where wider components are required this will be achieved by introducing a vertical, aluminium joint.
- c. In general, the standard changeroom cubicle module is 900 mm centre-to-centre and we design our cubicles with standard sized partitions and stiles, allowing for uniform door openings that suit the actual site dimensions.
- d. The individual cubicle components need to be identified, sized and specified in the BOQ documentation. In general, on the basis of 900 mm cubicle centres:
 - i. Partitions 1600 mm wide x 1800 mm high complete with vertical joint. Partitions span from a masonry wall to a stile.
Unit of measure = No.
 - ii. Full Stiles 230 mm wide x 1850 mm high complete with two (2) single telescopic stainless steel leg anchors in a standard arrangement.
Unit of measure = No.
 - iii. End Stiles 150 mm wide x 1850 mm high complete with double telescopic stainless steel leg anchors in a standard arrangement.
Unit of measure = No.
 - iv. Wall Stiles 115 mm wide x 1850 mm high complete with single telescopic stainless steel leg anchor in a standard arrangement.
Unit of measure = No.
 - v. Special Wall Stiles **Width to suite** x 1850 mm high complete with telescopic stainless steel leg anchor / anchors (single or double in a standard arrangement).
The decision on whether one or two legs are necessary is dependent on the width of the special wall stile:
if $W_{SWS} \leq 1200$ mm one (1), if $W_{SWS} > 1200$ mm two (2) leg anchors. In general, a special wall stile spans from a masonry wall up to a door opening.
Unit of measure = No.

- vi. Doors Available in varying sizes to suit the actual opening between stiles.
The physical size of the doors would be equal to the dimension of the opening + 70 mm to allow for the positioning of the hinges and the keep.
For pricing purposes the doors are grouped into three price categories, based on door width:
- width \leq 750 mm x 1800 mm high
- width $>$ 750 mm but \leq 870 mm x 1800 mm high
- width $>$ 870 mm up to 970 mm x 1800 mm high
The latter sized doors are generally used in the design of toilet cubicles for disabled persons, are outward opening and should be fitted with rising hinges (door returns to the closed position).
Unit of measure = No.
- vii. Top Rail Included in the price of the doors.
- viii. Vitraflex Bench 300 mm deep x **Width to suit Cubicle Module**, with integral downstand (Radius = 25 mm, 150 mm high) and secured to brickwork by means of galvanized mild steel support brackets (The bench is generally located between partitions and is secured along the wall at the back of the cubicles).
Unit of measure = No.
- e. The overall height of the Vitraflex Changeroom Cubicles from finished floor level to top of Top Rail is of \pm 2025 mm.
- f. The standard height of the Vitraflex Telescopic Stainless Steel Leg Anchors is 150 mm. Special height leg anchors can be supplied subject to minimum quantities and / or surcharges.
- g. Please do not specify the Vitraflex Changeroom Cubicles in meters (m) in the Bills of Quantities as, without detailed drawings, our estimators will then not be in a position to determine the actual quantity and sizes of the various components required.
- h. In addition to the Vitraflex standard colour range, where specific colours need to be matched in enamel, this is done in accordance with good enamelling practice, after ensuring that the colours are proven stable under production conditions and as close as technically possible to the required colour. In addition, specific enamel thickness requirements need to be met (ideally the overall enamel thickness should be \pm 300 μ m) and allowance must be made for two (2) cover coats, over and above the general ground coat (black). Colours are matched progressively on a trial and error basis. Please refer to the Vitrex Document Ref. CC/CM/01 "Colour Matching in Enamel" for further details.
- i. Our staff and Agents remain available to address any queries, provide project specific recommendations as well as to assist with sizing and take-offs from the relevant drawings. We would then also be in a position to draw up an itemised component schedule and prepare a corresponding estimate for the proposed scope of work.
